

Tabelle1

As a user I want to book an available resource, so that my reservation is stored in the system

As a user I want to decide on the time frame of my reservation, so that no other user can book the same resource on the same time

As a user I want to decide if the booking is recurring, so that I don't have to book the same resource each time

As a user I want to be able to cancel a reservation, so that the Resource is available again on the specific timeframe for another user

As a administrator I want to add a resource to the system, so a user can book the resource

As a administrator I want to delete a resource, so that no user can reserve the resource.

As a user I want to see an overview of my reservation, so I can cancel a reservation

As a user I want to get an overview of the availability of a resource(time frames, when a resource is available) , so I can plan a reservation

As a user I want to get an overview of the resources, so I can decide which resource I want to reserve

As a user I want to log in to the system, so that I have acces to my reservations and to the resources

As a user I want to decide if a recurring booking is daily, weekly or monthly, so that I don't have to book the same resource each time

As a user I want to be able to decide on different dates and time frames, so that I can make a irregularly recurring reservation
